Dispensers

DISPENSERS

GLD-G8 Product Dispenser

THE TECHNOLOGY

The G8 Dilution System automatically mixes concentrates with water, dispensing the diluted chemical into secondary containers such as mop buckets, spray bottles or equipment. It has 8 different dilution options (bucket and sprayer) which allows workers to measure precise amounts of concentrates into secondary containers.

It has been specially designed for use with the Sany+ 4L chemical concentrates. The G8 Dispensers are pre-tipped at the factory, which makes it harder for workers to engage in unauthorized custom dilutions.

FEATURES

- Friendly interface, easy installation, easy servicing
- 8 Different dilution rates available
- Flex-gap back flow prevention

GLD-G8

GLD-POPD POPS Portable Dilution System

THE TECHNOLOGY

The POPS Dilution System automatically mixes concentrates with water, dispensing the diluted chemical into secondary containers such as mop buckets, spray bottles or equipment. It has two dilution options (high and low) which allows workers to measure precise amounts of concentrates into secondary containers.

It has been specially designed for use with the Sany+ 2L chemical concentrates. The dilution rates for our 2L concentrates are pre-set at the factory, which make the units safer for the user by restricting the workers access to the concentrated chemical, as well as making it harder for workers to engage in unauthorized custom dilutions.

The POPS Dilution Head is easy to connect to 2L chemical concentrates, and features dual flow rates as well as built in backflow prevention.

FEATURES

- Quickly disconnects to easily transfer to multiple areas
- Includes dual flow rates and built in backflow prevention
- Bottle, bucket and scrubbers fill
- Proprietary design used with Greenlabs manufactured products
- Complete with quick disconnect
- No assembly or maintenance required; all 2L chemicals are pre-tipped at factory
